RECENT RESEARCH PROJECTS

- Unsupervised Single-View Mesh Reconstruction,** Sep. 18 - Present
- Present a highly effective differentiable renderer that faithfully approximates the standard graphics renderer in the forward pass of deep neural network. Based on this renderer, we have achieved unsupervised single-view reconstruction with comparable performance to the supervised counterparts.
- Interactive Facial Hair Editing and Synthesis,** Feb. 2018 - Present
- Users can design facial hairs of different shapes/lengths/densities via simple sketching, while keeping the style of a target facial hair defined by an exemplar image. The framework is powered by Generative Adversarial Network (GAN).
- Perspective Normalization in Portrait Photos,** Mar. 18 - Present
- A deep learning based approach to rectify the facial distortion in an unconstrained portrait image shot in a near range. The technique greatly improves the robustness and accuracy of face recognition and 3D face reconstruction from a single portrait photo.
