# RECENT RESEARCH PROJECTS

#### Unsupervised Single-View Mesh Reconstruction,

Sep. 18 - Present

- Present a highly effective differentiable renderer that faithfully approximates the standard graphics renderer in the forward pass of deep neural network. Based on this renderer, we have achieved unsupervised single-view reconstruction with comparable performance to the supervised counterparts.

#### Interactive Facial Hair Editing and Synthesis,

Feb. 2018 - Present

- Users can design facial hairs of different shapes/lengths/densities via simple sketching, while keeping the style of a target facial hair defined by an exemplar image. The framework is powered by Generative Adversarial Network (GAN).

#### Perspective Normalization in Portrait Photos,

Mar. 18 - Present

- A deep learning based approach to rectify the facial distortion in an unconstrained portrait image shot in a near range. The technique greatly improves the robustness and accuracy of face recognition and 3D face reconstruction from a single portrait photo.

#### Autocomplete Hair Modeling in VR,

Jun. 17 - Present

- Develop a 3D VR authoring system for immersive interaction with the hair models. Our system combines the flexibility of manual authoring, the convenience of data-driven automation and the power of machine learning for high quality hair modeling.
